## GREEN PROJECT

### • *Greening Habitat for Humanity*

"Simple," "decent," "affordable." Those three words describe the some quarter million houses built by the organization since 1976. Now, after a \$30 million grant from the Home Depot Foundation, add a fourth word: "green." "With this partnership we can now offer a \$2,000 grant per house," says Habitat senior director Martin Kooistra. Among those new eco-friendly perks are low-e-coated windows, Energy Star appliances and even solar panels. —*Peter Hellman*
